Bulletin Board System

SyncTERM example - The key setting is 'Screen mode'. Set it to C64 of C128

The C64U has the capability to host and connect a bulletin board system. This is an online service that is mostly forgotten and not even used originally the internet.

With the limited online capabilities of the C64U is using a BBS besides IRC-chat the obvious thing you can do online with this computer.

The BBS-software is included in the 'The Very Second'-software bundle.

If you want to connect to a BBS on other devices you need a client;

- MuffinTerm for MacOS and iOS
  - https://muffinterm.app/
- SyncTERM for Windows, Linux, OpenBSD, NetBSD, OS X, and FreeBSD
  - https://syncterm.bbsdev.net/
- DCTelnet - A classic Amiga Telnet/BBS client with Zmodem
  - https://github.com/bruno-frederic/dctelnet

C64U specific BBS's

C64 Ultimate Club

Sysop Nick McLaren.

- telnet c64u.club (port 6400)
  - use PETSCII, (ASCII is not supported)
