Current Wiki settings

- Current Wiki admins (=superuser)
    - Walter
    - Has full configuration options of the wiki. Full user manager control. Can delete files.
- Current Wiki managers
    - none
    - Gives access to certain admin functions. Like the 'revert manager' to mass revert edits. You can see the ip address of users and ban ip address.
    - Has the option to delete files in the 'Media Manager'. Note: there is no 'undelete'
        - Link to the 'Admin'-section as strangely there is no link to this page visible for 'managers' in the GUI
- There is a function that gives a page on the wiki the status robots 'noindex, no follow'. The idea is to prevent google indexing spam. By default it was set to 5 days. Current setting is one hour.

If you think you can use access rights you do not have please ask — *walter 2026/01/11 20:51 UTC*

Some special tweaks on this wiki

- Interwiki to the c64-wiki.com wiki
    - {{c64w>Keyword}}
    - Example: Assembler
